

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

INDEX OF TRADES.....	597

I.

THE STATE OF EMPLOYMENT.

Returns from a selected list of representative labor unions as to idleness on the last working day of each month for the calendar years 1902-1912 are summarized in Table 1.*

TABLE 1.—PERCENTAGE OF IDLE WAGE EARNERS IN REPRESENTATIVE TRADE UNIONS AT END OF EACH MONTH.

YEAR	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
1902.....	20.9	18.7	17.3	15.3	14.0	14.5	15.6	7.1	6.3	11.2	14.3	22.3
1903.....	20.5	17.8	17.6	17.3	20.2	23.1	17.8	15.4	9.4	11.7	16.4	23.1
1904.....	25.8	21.6	27.1	17.0	15.9	13.7	14.8	13.7	12.0	10.8	11.1	19.6
1905.....	22.5	19.4	19.2	11.8	8.3	9.1	8.0	7.2	5.9	5.6	6.1	11.1
1906.....	15.0	15.3	11.6	7.3	7.0	6.3	7.6	5.8	6.3	6.9	7.6	15.4
1907.....	21.5	20.1	18.3	10.1	10.5	8.1	8.5	12.1	12.3	18.5	22.0	32.7
1908.....	36.9	37.5	37.5	33.9	32.2	30.2	26.8	24.6	24.6	23.1	21.5	28.0
1909.....	29.3	26.5	23.0	20.3	17.1	17.4	13.9	11.9	14.5	13.7	13.3	20.6
1910.....	24.5	22.4	22.6	16.0	14.5	15.4	19.4	22.3	12.5	15.0	17.5	27.3
1911.....	26.7	24.8	25.6	21.3	27.2	22.9	15.5	11.7	11.2	11.6	20.0	34.2
1912.....	25.8	17.6	18.8	13.3	20.1	22.8	21.1	9.1	5.9	7.4	15.3	30.1
Mean, 1902-12.	24.5	22.0	21.7	16.7	17.0	16.7	15.4	12.8	11.0	12.3	15.0	24.0

These returns indicate less idleness at the end of every month, except July, of 1912 than in the corresponding month of 1911. The mean percentage of idleness for the first six months of 1912 was 19.7 as against 24.8 for the corresponding period in 1911. For the second half of the year, the mean percentage was 14.8 in 1912 as against 17.4 in 1911. The mean percentage for the entire year was 17.3 in 1912 as against 21.1 in 1911.

* In compiling the list of representative unions, the aim has been to preserve, as far as possible, the same proportionate representation of different industries and industrial centers, particularly the former, in the selected group as appears in the membership of all trade unions in the state. Of the 183 unions reporting in the latter part of the year 92 were in New York City, 31 in Buffalo, 11 in Rochester, 13 in Albany, 8 in Syracuse and 28 were in 16 other localities. The following table compares, by industries, the distribution of members who were reported as to idleness, in the selected groups and in all unions at the end of September, 1912:

INDUSTRY	NUMBER OF MEMBERS		PERCENTAGE OF TOTAL IN EACH GROUP		Percentage of total group membership in representative unions
	All unions	Representative unions	All unions	Representative unions	
1. Building, stone working, etc.....	128,474	31,072	26.2	27.5	24.2
2. Transportation.....	80,439	17,080	16.4	15.1	21.2
3. Clothing and textiles.....	129,707	30,989	26.4	27.4	23.9
4. Metals, machinery and shipbuilding.....	28,484	7,280	5.8	6.4	25.6
5. Printing, binding, etc.....	29,084	7,018	5.9	6.2	24.1
6. Wood working and furniture.....	11,059	3,038	2.2	2.7	27.5
7. Food and liquors.....	17,476	4,237	3.6	3.8	24.2
8. Theaters and music.....	3,849	1,167	0.8	1.0	30.3
9. Tobacco.....	8,639	2,462	1.8	2.2	28.5
10. Restaurants, trade, etc.....	21,315	2,201	4.3	1.9	10.3
11. Public employment.....	14,895	2,690	3.0	2.4	18.1
12. Stationary engine tending.....	10,474	2,547	2.1	2.2	24.3
13. Miscellaneous.....	7,283	1,329	1.5	1.2	18.3
Total.....	491,178	113,110	100.0	100.0	23.0

Inspection of Table 2 below shows that the decrease of idleness in 1912 as compared with 1911 was general among the industries. The mean monthly percentage of idleness in eight of the industries was less than in 1911 and greater in four, while in one the percentage was unchanged. Of the four leading industries, which taken together constitute three-fourths of the membership of the unions from which monthly reports are secured, three reported decreases in idleness and one — clothing and textiles — reported an increase.

TABLE 2.—MEAN MONTHLY PERCENTAGE OF IDLENESS IN REPRESENTATIVE TRADE UNIONS' BY INDUSTRIES.

INDUSTRY	1912	1911	1910	1909	1908	1907	1906	1905
1. Building, stone working, etc.....	21.2	30.7	24.1	26.7	42.3	25.0	10.1	15.3
2. Transportation.....	7.5	19.9	14.0	23.8	31.0	16.6	12.5	13.7
3. Clothing and textiles.....	28.8	22.8	34.1	18.8	34.3	16.4	8.5	11.0
4. Metals, machinery, etc.....	11.4	24.0	7.7	13.7	29.0	10.4	5.4	5.2
5. Printing, binding, etc.....	5.7	5.2	5.0	9.4	18.7	11.9	16.4	9.9
6. Wood working and furniture.....	17.8	19.4	10.5	13.3	33.2	17.9	11.6	15.5
7. Food and liquors.....	9.9	8.5	12.8	9.6	11.0	7.4	7.1	7.2
8. Theaters and music.....	15.7	18.7	13.4	4.9	16.1	6.6	7.8	12.1
9. Tobacco.....	7.7	12.8	11.1	12.4	15.4	11.0	4.9	5.8
10. Restaurants, trade, etc.....	5.3	5.3	5.4	6.6	11.1	6.5	5.0	7.2
11. Public employment.....	1.0	1.2	1.3	1.2	1.1	1.4	2.4	5.1
12. Stationary engine tending.....	1.9	1.8	1.4	1.6	3.1	1.8	1.9	2.5
13. Miscellaneous.....	7.1	13.1	14.5	14.4	22.0	4.6	2.8	3.9
Total.....	17.3	21.1	19.1	18.5	29.7	16.2	9.3	11.2

That idleness due to all causes was less in 1912 than in 1911 is indicated by the two preceding tables. In Table 3 following, the causes of idleness are specified under three headings.

TABLE 3.—PERCENTAGES OF IDLENESS IN REPRESENTATIVE UNIONS AT END OF EACH MONTH FOR SPECIFIED CAUSES.

YEAR	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Mean for yr.

1912....	1.3	1.3	1.3	1.2	1.1	1.3	1.0	1.0	0.9	1.2	1.1	1.1	1.2

TABLE 3.—PERCENTAGES OF IDLENESS IN REPRESENTATIVE UNIONS AT END OF EACH MONTH FOR SPECIFIED CAUSES—*Concluded.*

YEAR	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Mean for yr.
<i>All Other Causes (Principally Condition of Trade).</i>													
1904....	22.0	18.8	18.9	12.7	10.9	10.8	8.6	7.7	6.3	6.4	7.1	15.4	12.1
1905....	18.0	15.3	14.6	8.2	5.9	6.7	6.3	5.4	4.4	3.6	4.0	9.2	8.5
1906....	11.8	12.4	8.9	5.0	4.1	3.2	4.7	4.0	4.3	4.5	5.3	13.3	6.8
1907....	19.0	17.4	15.5	8.5	7.7	6.2	5.4	7.7	9.6	16.1	20.0	30.5	13.6
1908....	35.1	35.9	35.9	32.2	30.6	28.6	25.2	22.2	23.0	21.3	20.0	25.9	28.0
1909....	26.4	24.6	21.2	15.1	12.7	13.1	10.0	8.2	11.0	9.6	9.5	17.7	14.9
1910....	16.5	15.5	17.4	12.6	11.8	11.7	8.1	7.5	8.4	13.4	15.0	25.6	13.6
1911....	24.9	22.9	24.1	19.6	24.0	17.7	13.1	9.5	8.9	9.8	17.6	31.9	18.7
1912....	24.4	16.1	17.4	11.9	18.5	21.0	19.0	6.3	4.9	6.0	14.1	23.1	15.2

The idleness caused by labor disputes was less in each month of 1912 than in 1911, except in August and December, and the mean idleness for the year 1912 was also less than for 1911. The increase in August was caused by the teamsters' strike in New York City which lasted from August 29 to September 7. The great increase in December was caused by the garment workers' strike in New York City which began on December 30. At the end of December, more than 80 per cent of the members of these representative unions in the clothing trades in New York City were on strike.

Idleness due to labor disputes and to disability aside, the remaining idleness gauges the demand for labor, since it represents chiefly the idleness of those who, although desiring to find employment, are unable to do so because of general or seasonal business conditions. Table 3 indicates that idleness of the latter sort was less in each month of 1912 than in 1911 with the exception of June and July.

It appears, then, that the lessened idleness reported by these representative unions was the net result of practically constant idleness due to disability, of somewhat less idleness due to labor disputes and of a considerably better demand for labor in 1912 than in 1911.

In Table 4 following are found the returns as to idleness due to all causes in each industry by months for 1912 and preceding years.

TABLE 4.—PERCENTAGE OF MEMBERS OF REPRESENTATIVE TRADE UNIONS UNEMPLOYED AT THE END OF EACH MONTH, BY INDUSTRIES.

<i>I. Building, Stone Working, Etc.</i>												
YEAR	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
1904.....	38.3	31.2	42.6	12.8	9.3	11.9	12.9	19.8	15.2	12.6	17.1	32.9

The building industry shows less idleness in every month of 1912 than of 1911, January excepted. Every month shows a decrease in the transportation industry. In the clothing and textiles industry there was a decrease in idleness in the first five months of the year, but beginning with June in each of the remaining months, except September, an increase was reported. In the metals-machinery industry, each month after the first two shows a decrease in idleness. Considering each of these four leading industries in turn it may be noted that the decreased idleness in the building industry was due to an increased demand for labor. The greatly decreased idleness reported in the transportation industry was due not alone to a better demand for labor but in large part to a change in the list of unions reporting in the navigation trades included in this industry. Partly owing to difficulty in securing reports and partly because of a change in

the distribution of union members in the navigation trades in the state as a result of which by far the greater part of such members are now in New York City, unions in those trades in the latter city were substituted for a large Buffalo union which heretofore has made up the greater part of the membership reporting in those trades in the list of representative unions. The significance of this change lies in the fact that in the winter and early spring there is almost complete suspension of work in Buffalo navigation trades owing to the closing of traffic on the great lakes whereas in the New York City navigation trades which are on salt water there is no such seasonal idleness. This change accounts in large part for the drop in the percentage of idleness in the transportation industry in 1912 as compared with 1911. There was, however, some decrease in idleness due to a greater demand for labor.

In the clothing and textiles industry, although the idleness in each of six months of 1912 was less than in the corresponding month of 1911, the increased idleness in each of the other six increased the mean percentage for the twelve months as compared with the year 1911. There were two periods of marked increase in idleness. One was in June and July when there was a unusual degree of idleness in the cloak and suit making trades in New York City due to the fact that the busy season which usually begins in July did not begin until August in 1912, whereas in 1911 the busy season began unusually early — before the end of June — so that the returns for both June and July, 1912, show greater idleness for lack of work as compared with those months in 1911. This is the explanation of the increased percentage of idleness in those months referred to in connection with Table 3, because of the large numbers involved.

In the metals-machinery industry, the great reduction in idleness was due to considerably less dispute idleness and in larger part to less idleness for lack of work. No other important industry shows a marked change in 1912 as compared with 1911.

The foregoing returns were all of idleness in representative unions only on the last working day of each month in the year. In addition to the foregoing returns are available for practically all unions in the state with respect to idleness in the first and third quarters of the year. These latter returns also cover idleness

continuous throughout the three months, and the amount of employment of those who had some work.

Table 5 summarizes the returns from all unions as to idleness continuous throughout the quarter and also as to the amount of employment for those who had some work. It will be seen that in the first quarter the percentage of continuous idleness was somewhat less than in 1911 and in the third quarter such idleness was very slightly greater. The average number of days worked by those who had some employment and reported its duration (column 7 of Table 5) in the first quarter was the same as in 1911 and in the third quarter it was less by somewhat more than one day. Reference to Table 10 shows that the industry chiefly responsible for the decline in the number of days worked in the third quarter was clothing and textiles in which, for about 96,000 members reporting, the average number of days worked was eleven fewer than in the corresponding quarter of 1911. This reduction was due principally to a decrease of nine in average days worked in the garment trades, the main branch of the group, and to an exceptional decrease of 32 days in hats, caps and furs caused by the furriers' strike in New York City from June 20 to September 7.

TABLE 6.—QUARTERLY STATISTICS OF EMPLOYMENT AND IDLENESS, 1897-1912.

YEAR	Number reporting	THROUGHOUT QUARTER		THOSE EMPLOYED —			Aggregate number of days of employment	Number re- porting idle- ness and duration of employment (col. 3 + col. 6)	Average number of days per capita

Table 6, which summarizes the returns from all unions as to idleness at the end of March and of September, indicates less idleness as compared with the corresponding dates in 1911. This is in accord with the returns from representative unions, as given in Table 1, except that, in each instance, a greater reduction in idleness was indicated by the returns from the latter.

II.

WAGES AND EARNINGS.

CHANGES IN WAGES.

In the table following are summarized the changes in wages reported by all trade unions in the state for the year ended September 30, 1912. In detailed Table V of this report will be found the union rates of wages in the third quarter of 1911 and in Table VI the changes in wages made since October 1, 1911.

The number of union members affected by wage changes during the year was practically the same as in 1911. The number affected by decreases, although as usual insignificant as compared with the number receiving increases, was one-half again as great as last year but the amount of the average weekly decrease was only 42 cents in 1912 as compared with \$3.81 in 1911. The average increase in 1912 was slightly less than in 1911.

TABLE 11.—CHANGES IN RATES OF WAGES REPORTED BY TRADE UNIONS, 1901 TO 1912.

YEAR	INCREASES		DECREASES		NET CHANGES		
	Members affected	Average weekly increase	Members affected	Average weekly decrease	Members affected	Total weekly increase	Average weekly increase
1901.....	47,585	\$1 97	2,668	\$2 67	50,253	\$86,807 00	\$1 73
1902.....	93,225	1 78	3,329	89	96,554	162,634 00	1 68
1903.....	65,182	1 81	394	54	65,576	117,450 00	1 79
1904.....	19,182	1 59	1,102	2 30	20,284	28,060 00	1 38
1905.....	34,766	1 85	286	3 96	35,052	63,087 00	1 80
1906.....	78,382	1 90	387	35	78,779	148,885 00	1 90
1907.....	73,560	2 68	2,685	1 26	76,245	193,582 00	2 54
1908.....	9,718	2 00	7,101	1 91	16,819	5,880 00	35
1909.....	12,082	1 87	355	3 70	12,437	21,197 00	1 70
1910.....	125,141	2 46	219	52	125,360	307,619 59	2 45
1911.....	52,541	1 57	700	3 81	53,241	79,596 21	1 50
1912.....	51,185	1 52	1,276	42	52,461	77,378 79	1 47

The distribution by industries of the changes in wages is shown in the following table.

TABLE 12.—CHANGES IN RATES OF WAGES REPORTED BY TRADE UNIONS, OCTOBER 1, 1911—SEPTEMBER 30, 1912, BY INDUSTRIES.

INDUSTRY	INCREASES			DECREASES			NET CHANGES

Thereof: Men.....	49,528	\$75,454 49	\$1 52	1,276	\$534 22		\$74,920 27	\$1 47	
Women.....	1,657	2,458 52	1 48				2,458 52	1 48	

The figures for changes in the railroad trades (Group II) are not perhaps complete, owing to the retroactive effect of the award of the Board of Arbitration in the controversy between the eastern railroads and the locomotive engineers. The award was made retroactive to May 1, 1912, but was not rendered until November, 1912, after the regular returns used in this table were collected. It is stated, however, that in this state the award affected engineers chiefly in the way of standardization of wages and did not result in any general increase, owing to the fact that to a large extent on the principal roads in the state rates were already as high as the standard rates established by the award for all the fifty-two eastern roads involved.

One-fourth of the total number of union members affected by the changes in wages reported were in the building industry, including all (except 4) of those who suffered decreases. In every case of decreased weekly earnings, however, there was actually an increase in the rate of wages but this was accompanied by a reduction in the number of hours worked per week thereby causing a decrease in the weekly earnings. For example, 916 carpenters in Rochester received an increase in wages from \$3.50

to \$3.75 per day and at the same time the number of working hours per week was reduced from 48 to 44, thereby reducing weekly earnings from \$21 to \$20.63. The increases were generally distributed throughout the state.

The printing industry had the next largest number of members affected by wage changes, all of which were increases. Of these, 85 per cent were in New York City. All of the increases in the restaurant group were in New York City. More than 90 per cent of those affected in transportation were in New York City. In clothing and textiles, about 65 per cent of those affected were in New York City and 20 per cent were in New York Mills near Utica. Of the 1,657 female unionists who received increases, 1,395 (84 per cent) were in the clothing and textiles industry.

The following table summarizes the returns showing whether the wage changes above noted were effected with or without strike or lockout.

TABLE 13.—METHOD OF EFFECTING CHANGES IN WAGES.

INDUSTRY	MEMBERS AFFECTED BY CHANGES MADE —

Thereof: Women.....	595	1,062

As will be seen, industrial disputes preceded the wage changes involving one-third of the members affected while two-thirds of the members affected secured such changes without resort to strike. In 1911, less than one-fourth of the members affected by wage changes secured such changes as the result of strike. All of the

7,000 union members in the restaurant group, who secured increases as the result of strike (40 per cent of the total number in all industries) were members of one union of hotel employees in Manhattan and received wage increases as the result of a strike in May-June, 1912. In the clothing and textiles industry, of the 3,500 union members whose wages were increased as the result of strike, 2,100 jacket makers (600 of whom were women) and 315 fur workers were in New York City and 1,050 cotton goods workers (450 women) were at New York Mills near Utica. In the building industry, 1,803 carpenters in Buffalo secured increases as the result of a strike in May-June, 1912, and 800 painters in several different localities also secured increases as the result of strikes. In the transportation industry, 1,000 seamen in New York City received increases as the result of a strike in July, 1912, and 200 truck and wagon drivers, also in New York City, received increases as the result of a strike in August-September, 1912. In New York City also were 1,753 bookbinders who received wage increases as a result of the strike in September-November, 1912.

AVERAGE DAILY EARNINGS.

The average daily earnings of union men in the first and third quarters of 1912 and of the three preceding years are presented in Table 14. These returns probably reflect more faithfully the actual tendency of the course of wages than do the changes in rates of wages recorded in the tables immediately preceding, for the reason that, whereas changes in time rates of wages can be ascertained accurately, it is impracticable to secure complete and accurate returns of wage changes in trades where complicated piece work schedules prevail, as for example in the clothing and tobacco trades. The effect of changes in wages, whether in time rates or piece rates, will, however, appear in earnings. Any tendency of overtime work at higher rates to increase average daily earnings is prevented by the reduction of such overtime at higher rates to its equivalent in time at regular rates which is done in compiling these returns.

All industries.....	\$3 17	\$3 23	\$3 18	\$3 30	\$3 26	\$3 25	\$3 20	\$3 28

It will be seen that in the first quarter the average daily earnings for all industries combined were less than in the corresponding quarter of 1911 and in the third quarter such earnings were greater than in the third quarter of 1911. It appears on inspection of the table, however, that in the first quarter there were increases in nine of the industries, while in four industries only were there decreases. Transportation was the only one of the five leading industries which reported a decrease in daily earnings. This was the result of changes in the composition of the membership of the navigation trades in that industry. A much larger number of relatively low-paid men were reported in the navigation trades in the first quarter of 1912 than in the first quarter of 1911, which had the effect of reducing the average daily earnings of the industry as a whole. Of even greater importance, however, in reducing the average daily earnings for all industries was the reduction of earnings in the theaters and music group, due also not to an actual decrease in compensation but to a change in the numbers reporting.

In the third quarter of 1912, the average daily earnings were \$3.28 as compared with \$3.25 in the corresponding quarter of 1911. In seven of the industries, including four of the five leading ones, the average daily earnings were higher and in six, including one of the leading industries — clothing and textiles — the aver-

erage daily earnings were lower as compared with the same period in 1911. The decreased daily earnings in the clothing industry were due in part to the doubling of membership in the hats, caps and furs group, which is a lower paid group of workers than the industry as a whole.

In Table 15 are listed all the individual trades which reported as to number of days worked and amount of earnings for 2,000 or more male members in the third quarter of 1912. Of these trades — 53 in number — increases in average daily earnings were reported in 37 and decreases in 14, while 2 reported no changes as compared with the third quarter of 1911. Of the clothing and textiles trades listed herein, five with a membership of 24,839 reported increases in daily earnings and four with a membership of 46,392 reported decreases.

* Includes only those trades having 2,000 or more members reporting days worked and earnings on September 30, 1912. (a) All branches, including grains workers and maltsters. (b) Includes cable splicers and linemen. (c) Bricklayers', masons' and plasterers' laborers. (d) Pressmen's assistants and press feeders.

AVERAGE QUARTERLY EARNINGS.

Quarterly earnings are the product of the number of days worked during the quarter multiplied by the daily rate of pay and are dependent, therefore, upon both of these factors. The preceding tables indicate that in the first quarter of 1912 the average amount of employment was the same as in the corresponding quarter of 1911 while daily pay was less. A comparison of Table 16 with previous reports shows that the average earnings of all union men in the first quarter of 1912 were \$209.67 as compared with \$212.53 in 1911. In the third quarter, average employment was less by one day as compared with 1911 and daily pay was slightly higher. The average quarterly earnings were \$224.83 in the third quarter of 1912 as compared with \$225.77 in the same quarter of 1911.

TABLE 16.—AVERAGE QUARTERLY EARNINGS OF TRADE UNIONISTS IN 1912.

INDUSTRY	MEN			WOMEN		
	First quarter	Third quarter	Six months	First quarter	Third quarter	Six months
1. Building, stone working, etc.....	\$192 57	\$258 11	\$450 68

10. Restaurants, trade, etc.....	201 49	201 04	402 53	123 20	119 14	242 34
11. Public employment.....	271 71	276 40	548 11	260 00	101 88	361 88
12. Stationary engine tending.....	260 02	275 86	535 88
13. Miscellaneous.....	201 42	181 44	382 86	87 39	114 20	201 59
All trades.....	<u>\$209 67</u>	<u>\$224 83</u>	<u>\$434 50</u>	<u>\$103 69</u>	<u>\$87 38</u>	<u>\$191 07</u>

In considering the significance of the above figures it is necessary to bear in mind that the changes in the composition of the membership of certain industries which were referred to in connection with the returns on daily earnings also produced an effect on quarterly earnings. The chief reason for the decrease in quarterly earnings in the first quarter is that reports as to earnings were received from only a small number (115) of actors with large earnings as compared with a large number (4,655) of such who reported in the first quarter of 1911. The decrease in

quarterly earnings of this industry was \$288, a greater sum than the entire earnings of any other industry. Elimination of the actors from the first quarter of both years would make the average quarterly earnings of all industries \$4 greater in 1912 than in 1911.

In the third quarter, the clothing and textiles industry had a reduction of 18 cents in daily earnings and of 11 days in amount of employment with a resultant decline of \$47 in quarterly earnings. The increased idleness in this industry was caused, as was pointed out in connection with a preceding table, by a reduction in employment in the garment trades and by the strike among the furriers in New York City during the third quarter of 1912.

The distribution of the earnings of male organized workers in the first and third quarters of the year appears in the two following tables. From Table 18, it may be seen that the percentage of men in the two higher grades of earnings was greater in the first quarter of 1912 than for the corresponding quarter of 1911, while the reverse was true in the third quarter.

TABLE 17.—ORGANIZED WAGE WORKERS CLASSIFIED ACCORDING TO AMOUNT OF QUARTERLY EARNINGS.

GRADES	FIRST QUARTER				THIRD QUARTER			
	Number of members		Per cent in each grade		Number of members		Per cent in each grade

COMPARATIVE INDEXES.

In addition to the preceding returns, there are presented below two tables of index numbers* based upon returns as to daily and quarterly earnings from a number of the leading and longer organized trades which are less subject to the disturbing changes in number and composition of membership reporting, such as was pointed out in connection with some of the trades in preceding tables. About 55 per cent of the total number of male unionists reporting as to wages and earnings are included in these trades. The indexes based upon returns in the first and third quarters in the years 1897-1912 inclusive are presented.

It will be noted that the index for per diem and also for quarterly earnings stood at the highest point yet recorded. It will be remembered that the returns as to daily earnings of all industries combined showed a decrease in daily earnings in the first quarter of 1912 and an increase in the third quarter, and that the returns as to quarterly earnings showed small decreases in each quarter. But, as has been already pointed out, the de-

* A description of the method used in their construction may be found in the Annual Report of the Bureau of Labor Statistics, 1907, p. xxix.

creases in daily and also in quarterly earnings in the first quarter were due chiefly to the absence of returns from actors in the first quarter of 1912 and in part also to the changes in the membership of the navigation trades in the transportation industry. In the third quarter, the reduction in average quarterly earnings (94 cents) was, as has been pointed out, due principally to increased idleness in the clothing and textiles industry. This industry is represented by two trades only in the list of trades upon which the index numbers are based so that decreased earnings in that industry are reflected only slightly in these index numbers.

III. HOURS OF LABOR.

In Detailed Table V of this report will be found the daily and weekly hours of labor of organized workers as reported by all labor organizations in September, 1912. The changes in hours, consisting of reductions only, appear in Table VII. In the table following are summarized the changes in hours in 1912 as compared with previous years.

TABLE 21.—CHANGES IN THE HOURS OF LABOR REPORTED BY TRADE UNIONS.

YEAR ENDED SEPT. 30 —	DECREASES			INCREASES			NET REDUCTION		
	Work- ers	Total hours	Aver- age hours a week	Work- ers	Total hours	All workers	Total hours	Aver- age hours a week	8-hour day secured by —
1901.....	26,147	202,308	7.8	319	1,323	26,466	200,985	7.6	3,163
1902.....	61,853	290,422	4.7	5,234	37,279	67,087	253,143	3.8	8,603
1903.....	21,636	112,870	5.2	342	2,919	21,978	109,951	5.0	5,833
1904.....	6,986	38,058	5.5	66	1,722	6,962	36,336	5.2	1,155
1905.....	5,959	34,162	5.7	722	3,709	6,681	30,453	4.6	1,069
1906.....	18,941	184,614	9.8	18,941	184,614	9.8	10,191
1907.....	11,886	81,709	6.9	702	3,864	12,588	77,845	6.2	3,134
1908.....	6,783	65,720	9.7	88	484	6,871	65,236	9.5	5,420
1909.....	5,236	27,191	5.2	12	72	5,248	27,119	5.2	1,211
1910.....	86,227	298,223	3.5	86,227	298,223	3.5	2,882
1911.....	12,426	77,235½	6.2	16	32	12,442	77,203½	6.2	2,261
1912.....	19,060	76,765½	4.1	19,060	76,765½	4.1	2,181

It will be seen that the number of workers securing decreases in working hours was 50 per cent greater than in 1911, being the greatest number (with one exception) of any year since 1903. The total reduction of working hours was practically the same as last year which, distributed among a number of workers one-half again as large, caused the average weekly reduction in working hours to be one-third less than in 1911. The number obtaining the eight-hour day was about the same as last year although constituting a smaller percentage of the total number whose hours were reduced than in any recent year except 1910.

In the following table, the distribution by industries of those securing decreases is summarized.

TABLE 22.—CHANGES IN HOURS OF LABOR IN 1912, BY INDUSTRIES.

INDUSTRY	DECREASES			Members obtaining the eight-hour day
	Workers	Total hours	Average hours a week	
Building, stone working, etc.....	3,379	15,777	4.7	458

Thereof:—Men.....	16,551	66,396‡	4.0	1,381
Women.....	2,509	10,369	4.1	800

As was the case in each of the three preceding years, the greatest gain was in the clothing and textiles industry in which 11,381 union members, of whom 2,509 were women, received an average reduction of 4 hours per week. Of these, 7,750 were fur workers in Manhattan who received a reduction from 53 to 49 hours per week in September, 1912, as the result of a strike. All except 6 of those obtaining the eight-hour day in this industry were neckwear makers in Manhattan (700 men and 800 women) who received a reduction in weekly hours from 50 to 48. In the building industry, Rochester had a larger gain than any other locality, 916 carpenters and 400 plumbers having secured a reduction from 48 to 44 hours per week, in each case without strike.

The reports of factory inspectors contain information as to hours worked by employees in inspected places, including both organized and unorganized workers. Statistics compiled from these reports include 47,768 factories with 1,142,256 employees.* The distribution of these employees according to weekly hours, by industries, is shown in the following summary table.

*See current volume of the Industrial Directory for detailed figures as to factory hours in 1912 for both localities and industries.

TABLE 23.—THE WEEKLY HOURS OF LABOR IN 1912, BY GROUPS OF INDUSTRIES.

All industries.....	227,496	524,125	362,943	27,692	1,142,256

A comparison of 1912 with earlier years as to weekly hours of work of factory employees appears in the following table. The percentage of employees working less than 58 hours per week was 65.8 in 1912 as compared with 62.9 in 1911.

TABLE 24.—PROPORTION OF FACTORY OPERATIVES WHOSE WEEKLY WORKING HOURS FELL WITHIN SPECIFIED LIMITS.

	1904	1905	1906	1907	1908	1909	1910	1911	1912
51 hours or less....	7.4	7.9	8.4	9.6	13.7	12.5	13.1	17.4	19.9

Over 63 hours....	1.7	2.4	3.4	3.3	2.7	3.0	3.3	2.4	2.4
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

A comparison of 1912 with earlier years as to the percentage of factory employees working less than 58 hours per week appears in the following table. As compared with 1911 for only one group — food, liquors and tobacco — was there a decrease in the percentage. In each of the others, there was an increase, except paper and pulp which showed no change.

TABLE 25.—PERCENTAGE OF OPERATIVES IN EACH INDUSTRY WHOSE WEEKLY WORKING HOURS WERE LESS THAN 58.

GROUPS OF INDUSTRIES	1906	1907	1908	1909	1910	1911	1912

IV.

LABOR ORGANIZATIONS IN 1912.

On September 30, 1912, there were in New York State 2,469 labor organizations, which was 29 fewer than the number in existence on September 30, 1911. During the year, there were formed 153 new organizations, while the total lapses were 182 (156 disbandments and 26 amalgamations). The number of lapses through disbanding and amalgamations was the same in each half of the year (91 in each instance), but whereas only 47 new organizations were reported in the first six months making a net loss of 44, in the second six months 106 new organizations were reported making a net gain of 15, and a net loss of 29 for the year.

The membership increased, however, in practically the same amount as the previous year. In the first half of the year, there was a loss of more than 6,000 and in the second half a gain of 29,000, or a net gain for the year of more than 22,000 members. The average number of members per union was 213 as against 202 in 1911.

* Decrease.

† In 1888 there were 826 labor organizations in New York, but not all of them reported their membership to the Bureau. The 580 unions that made such reports had 118,628 members; assuming that the remaining 246 unions averaged the same number of members, the aggregate membership of all unions in 1888 would have been 169,000, or about 12,000 more than in 1894, when industry was in the midst of an unusually severe depression.

CITIES AND VILLAGES.

Examination of the table following shows that, at the end of September, New York City had 28 per cent of the number of unions and 72 per cent of the members in the state, the remainder of the state having 72 per cent of the unions and 28 per cent of the members. The average membership per union in New York City was 545 and in the remainder of the state 84. More than 92 per cent of the total increase in membership in the state during the year was in New York City. The number of localities in the state having at least one labor organization was 214 as compared with 201 in 1911.

TABLE 27.—NUMBER AND MEMBERSHIP OF UNIONS IN NEW YORK CITY AND THE REMAINDER OF THE STATE, 1898-1912.

YEAR ENDED SEPT. 30 —	ORGANIZATIONS †		MEMBERSHIP		INCREASE IN MEMBERSHIP IN —

1910.....	722	1,735	337,509	144,415	94,352	14,843	109,195
1911.....	736	1,762	357,071	147,243	19,562	2,828	22,390
1912.....	693	1,776	377,709	148,963	20,638	1,720	22,358

The number of localities in the state having a union membership of 1,000 or more was 31 the same as in 1911. During the year, three localities (Odgensburg, Port Chester and Salamanca) dropped out of this list and three localities (Glens Falls, Geneva and White Plans) entered it. There were increases in membership in twenty and decreases in eleven of these localities. More than 94 per cent of the total union membership of the state was in these localities.

* Decrease.

† The number of cities and villages with at least one labor organization in September from 1898 to 1912 was as follows:

1898	1899	1900	1901	1902	1903	1904	1905	1906	1907	1908	1909	1910	1911	1912

* Decrease.

The relative rank as to trade union membership in the leading trade union centers of the state which appears in Table 29 shows no changes as compared with last year. Buffalo retained second place despite a decline of 7 per cent in membership.

INDUSTRIES AND TRADES.

The changes in the number and membership of labor organizations by industries are summarized in Table 30. Eight industries, including the four largest ones, lost in number of organizations. The increase in the second half of the year in public employment was due to the inclusion for the first time of a number of organizations of post-office clerks and letter carriers.

In membership, eight industries, including three of the four largest, gained, while five, including the metals-machinery industry, lost. The changes in transportation were numerous. The chief changes upstate were a gain of 1,000 street railway employees in the first half of the year and a loss of more than 2,000 seamen in Buffalo in the second half. The greatest single change in New York City was a gain of 5,000 seamen in the second half of the year. In clothing and textiles, there was a loss of more than 3,000 in the first half of the year mainly among the garment trades in New York City. In the second half of the year, there was an increase of more than 16,000 most of which was in New York City and nearly equally divided between the garment trades and the fur workers. Nearly all of the loss in the metals-machinery industry occurred in the first half of the year in various trades in New York City. The chief loss upstate was that of

more than 500 sheet metal workers due to the lapse of a union in Jamestown. The increase in the restaurant group was practically confined to one union of hotel employees and was the outcome of the strike of hotel workers there from May 7 to June 25.

The membership of each of the industrial groups in 1912 and previous years is set forth in Table 31. For the first time, the building industry was forced from the first place in point of numbers. In 1895, the membership of the clothing group was only 1,762 less than that of the building group. Thereafter, the

numbers in the latter were greatly in excess of the former until 1910, in which year, owing to a phenomenal increase, the membership in the clothing industry was only 677 short of that in the building industry. In 1912, the clothing industry further increased its membership, following a slight decline in 1911, so that on September 30 its membership was 200 in excess of that of the building industry. While only five of the thirteen industrial groups increased in membership, these included four of the five leading industries which together include 77 per cent of the total membership. The gain in clothing and in the restaurant group constituted the greatest changes in membership, each being more than double the loss in the metals-machinery group which was the only loss of importance.

TABLE 31.—NUMBER OF UNION MEMBERS IN EACH INDUSTRY, 1894 TO 1912. *

* The figures for industries in earlier years in this table do not always agree with those in the annual reports for those years owing to changes made to correspond to the revised classification of trades now used by the Bureau.

There were 279 distinct trades or branches of trades in September, 1912, each of which had at least one labor organization. Table 32 following shows that there was a union membership of 2,000 or more in 60 of these trades. Three trades—hotel employees, paper and pulp workers, and rock drillers, tool sharpeners, etc.—appear in this list which were not included in 1911 and three trades—carriage and wagon workers, knee pants makers, and masters and pilots—which appeared in 1911 list are not included in the 1912 list.

Increases in membership occurred in 34 trades and decreases in 26 trades. There was only one change as compared with 1911 in the relative standing of the first six trades. Truck and wagon drivers, which occupied fifth place in 1911, were displaced by hotel employees, the latter having made the largest individual gain in the list. Fur workers moved from fifty-fifth to thirteenth place, having made the second largest gain. There were no losses of importance, the largest being 1,668 among machinists.

In number of organizations, 15 trades increased, 25 decreased and 20 remained unchanged. The largest gains were 14 organizations of letter carriers, 12 of paper and pulp workers and 7 of hotel employees. The largest loss was of 6 organizations of hod carriers.

* July 1. † Includes unions composed exclusively of steamfitters and helpers. ‡ Includes press feeders. ‡‡ Includes clothing cutters and trimmers, and wrapper, shirt and waist cutters. ** Included in pressmen. §§ Included in plumbers, gas fitters, etc. (b) All branches, including grains workers and maltsters. (c) Includes knee pants makers. (d) Includes cable splicers and linemen. (e) Includes both commercial and railroad telegraphers.

ORGANIZED WORKING WOMEN.

The percentage increase among organized women in the state (5) was about the same as that among men (4.4), so that the proportion of organized women to the total number of organized workers underwent no change during the year, as may be seen from Table 33. The number of organized women in each industry and the number of unions composed of women only may be seen in Table 34. As was true in 1911, the chief changes occurred in the clothing and textiles industry. Contrary to last year, however, the bulk of the increase was not in the garment trades of that industry, which lost members in 1912, but was among the fur workers and the textile trades. The increase among the fur workers was in Manhattan, and the increase in the textile trades was in the Utica and Cohoes districts. The loss in the miscellaneous group was due chiefly to the lapsing of two unions of paper box makers in New York City in the first half of the year.

Conductors, Engineers and Firemen (see footnote v).							

* Average. † Not reported. ‡ Days. § Nights. ¶ Owing to the fact that in railroad train service wages are generally paid under the mileage system (which is the equivalent of piece work, in other industries) under complex schedules of rates varying according to class of service and runs and on different roads, which has always made it difficult for union secretaries to report wages in any other form than averages, it is deemed advisable to omit returns for these trades in this table, and to refer rather to Tables IV-a and IV-b on preceding pages for general averages of daily earnings and to the complete schedules of rates for the various roads in this State which are contained in the railroad agreements published in the current report of the Bureau of Mediation and Arbitration. Hours of labor are irregular in train service except switching, the hours for which are published in the agreements referred to.

APPENDIX.

FORMS USED FOR UNION REPORTS.

[589]

(1) QUARTERLY REPORT OF EMPLOYMENT AND EARNINGS.

Office No.....City or Village.....Industry No.....

NEW YORK STATE — DEPARTMENT OF LABOR

BUREAU OF LABOR STATISTICS

ALBANY, September 28, 1912

TO THE SECRETARY:

For the purpose of obtaining for public information statistics of the wages of organized working people on the line of the quarterly reports in use since 1896, the Bureau of Labor Statistics requests you to fill out this schedule. If you are unable to state the earnings of the members of your organization, on the basis of your personal knowledge, the Bureau will furnish upon your request blank forms like sample* enclosed for distribution among the individual members to be by them filled out and returned to you for your assistance in making the report. The Bureau desires to have the schedule returned as soon as possible, for which stamped return envelope is enclosed.

* * * * *

SPACES LEFT BLANK ARE TO BE FILLED IN BY SECRETARY

Name in full of your national organization.....

.....Local No.....

If independent local, name in full.....

Place and time (date and hour) of meeting.....

Name and address of president.....

Name and address of recording secretary.....

Name and address of corresponding secretary.....

Name and address of financial secretary.....

Name and address of business agent.....

.....
[Signature of secretary or other official who gives this information.]

Received.....Acknowledged.....

*Please fill out this blank for the STATE BUREAU OF LABOR STATISTICS and return it to the secretary of your union immediately.

1. How many days were you idle in the third quarter (July, August and September)?.....
2. Rate of wages (per day or week)?.....
3. Overtime in above three months: Days?.....Earnings?.....
4. Total earnings in the three months?.....
5. Were you idle on the last working day in September?.....
6. If so, underline the cause: Lack of work? Lack of material? Bad weather? Strike or lockout? Sickness, accident, or old age? Other cause (specify).....

REPORT FOR JULY, AUGUST AND SEPTEMBER, 1912

	Men	Women
1. Total number of members on September 30 (including those in good standing, in arrears, or suspended).....
2. Number of members, if any, who are —		
In business for themselves (masters, shop proprietors, team owners, etc.).
Permanently in some other trade.....
Retired on pension.....
3. Leaving out of account those under 2, how many members were idle on the last working day in September because of —		
Lack of work?.....
Lack of material?.....
The weather?.....
Strike or lockout?.....
Sickness, accident?.....
Old age?.....
Other reasons? (<i>state reasons</i>).....
Total idle at the end of September.....
4. Of above members idle at the end of September, how many did not work at all during July, August and September?.....

5. HOURS OF WORK

BRANCH OF TRADE	Sex	REGULAR HOURS OF WORK ON —				CHANGES IN HOURS SINCE APRIL 1, 1912			
		Satur-day	Sunday	Other days	Total per week	Date	Hours before change	Hours after change	Number of members affected
.....									
.....									
.....									

If hours were changed, was such change permanent for all seasons of the year?..... If not, for what period?.....

Did your members work Saturday afternoons during July, August and September?..... If they did not work on Saturday afternoons, did they receive pay therefor?.....

6. RATES OF WAGES

BRANCH OF TRADE	Sex	Present rates of wages	CHANGES IN RATES SINCE APRIL 1, 1912					
			Date	Rate before change	Rate after change	Number of members affected	WEEKLY EARNINGS (without overtime)	
							Before change	After change

Were above changes in wages brought about without strike?..... After strike?.....
 7. Has your union made a new contract or agreement with employers since April 1, 1912?.....
 If so, please inclose a copy with this report.

EMPLOYMENT AND EARNINGS

GENERAL STATEMENT

	Men	Women
Number of members in business for themselves, permanently in some other trade, or retired on pension (same as question 2)		
Number of other members working temporarily outside the trade throughout July, August and September		
Number of members idle throughout July, August and September (same as question 4)		
Number of members who worked at the trade.....		
Total membership (same as question 1)		

EMPLOYMENT AND EARNINGS OF THOSE WHO WORKED AT THE TRADE AS SHOWN ON FOURTH LINE ABOVE

[Note carefully directions on following page]

BRANCH OF TRADE	Sex	Number of members	Days worked by each *	RATE OF PAY		Quarterly earnings of each
				Amount	Per — (hour, day, week, month or year)	
				\$		\$
Total.....			X	X	X	X

Did your members work Fourth of July?..... If they did not work, did they receive pay for that day?.....

Did your members work Labor Day?..... If they did not work, did they receive pay for that day?.....

* Include in days worked, holidays for which pay was received.

DIRECTIONS FOR REPORTING EMPLOYMENT AND EARNINGS

DAYS WORKED. There are 92 calendar days in the quarter. This includes 70 week-days and 13 Sundays. Two legal holidays fall in the quarter—Fourth of July and Labor Day. If Saturday afternoon is a holiday, there were 13 such in the quarter, equal to 6½ full days. If no pay is received for holidays they should be deducted from number of days worked; but if pay is received for those days, even though no work is done on them, they are to be included in number of days worked. If the Saturday half-holiday, where it is observed, is made up by longer hours on other days, the number of working days in the week should be reckoned as six; but if the half-holiday is not so made up, reckon the number of working days per week as five and one-half. One day means a day of regular full time without overtime. If work is slack so that less than full time is being worked each day, the number of such short-time days must be reduced to number of full-time days. For example, a week of 6 days on half-time should be reckoned as 3 full days. On the other hand overtime should be added to the regular time made and if overtime is paid for at extra rates, such overtime should be reduced to time at regular rates. For example, 10 days overtime at double time rates should be reckoned as 20 days at regular rates. No deduction should be made from days worked or earnings for time lost for which full pay was received. In case of the railroad trades where wages are paid on the mileage or trip basis, days worked should be counted by reckoning as one day whatever number of miles or trips is usually regarded as a day's work.

RATE OF WAGES. The "rates of pay" should be reported as so much per "hour," "day," "week," "month" or "year," according to the actual method of payment in the trade. Where board or lodging is received in addition to cash wages (as in the case of bartenders, seamen, waiters, cooks) an allowance for the board or lodging, at whatever the latter is usually regarded to be worth in cash, should be made in addition to the regular cash wages. In such cases, state in a note how much is allowed for board. Where members are paid by the piece, simply write the words "piece work" in the "rate" column, but enter quarterly earnings in the last column.

QUARTERLY EARNINGS. With "days worked" and "rates" properly entered quarterly earnings may readily be computed by multiplying number of days worked by the rate per day; it being necessary of course, in case of pay by hour, week, month or year, to compute the equivalent rate per day. When pay is by the month or year, when full time has been worked during the quarter, quarterly earnings may be reckoned at three times the monthly rate or one-fourth of the yearly rate; but in all other cases quarterly earnings should be figured to the exact day.

The following example shows the proper form in which to enter the figures, as they might appear in a report for a carpenters' union.

BRANCH OF TRADE	Sex	Number of members	Days worked by each*	RATE OF PAY		Quarterly earnings of each
				Amount	Per — (hour, day, week, month or year)	
Carpenters.....	Male	5	\$83	\$3 00	day	\$249 00
".....	"	20	77	8 00	"	231 00
".....	"	4	60	40	hour†	192 00
Mill hands.....	"	6	76	2 60	day	197 60
".....	"	3	42	16 00	week	112 00
Millwrights.....	"	2	72	4 00	day	288 00
Foremen.....	"	2	76	27 00	week	342 00
Apprentices.....	"	5	50	20	hour‡	100 00
Total.....		47				

* Including holidays for which pay was received.

† Eight-hour day.

‡ Ten-hour day.

§ Includes 77 days regular time and 32 hours overtime at time and one-half (equivalent to 48 hours at regular rate, or 6 eight-hour days).

INDEX OF TRADES.

The table of contents in the front of this volume contains a general index. In addition, the following index to the statistics of organized labor has been prepared. Page references are given for each industry or group of trades, following which is an alphabetical list of all trades, with the number of the industry or group in which each is classified. The statistics for cities, towns and villages begin on page 100, with recapitulation on page 208 *et seq.*
